

Track rankings of many pages optimized for the same keywords

How about getting into Google's top with several of your site's pages at once? That's what Rank Tracker can help with.

Besides tracking the best ranking URLs of your site, Rank Tracker lets you check rankings of different pages you optimize for the same keywords. You can easily monitor how they're doing in search results: check their current rankings or compare ranking progress over time in clear tables and visual graphs.

How? All you have to do is add different pages of your site as Competitors in Preferences -> Competitors and recheck your rankings:

Now you can track the ranking data for each of the specified pages: current rankings, ranking difference, rankings progress graphs and more.
